FOR IMMEDIATE RELEASE

LightNex Communications Announces 20 Megabit Internet Available in Bozeman

BOZEMAN, MT – LightNex Communications has raised the bar on Internet Speeds available in Bozeman with its launch of 20 megabit per second downstream connections available to both Residential and Business customers.

This groundbreaking new service is immediately available to any customer served by LightNex's state-of-the-art all-digital, all-fiber-optic network. The service, featuring upload speeds of up to 5 megabit per second, is by far the fastest generally-available Internet service in Bozeman. Residential service is available for \$48.95 per month with no contract and no other bundled services. It is available for as low as \$39.16 bundled with other LightNex services.

“LightNex's new 20 megabit package is simply the fastest available in Bozeman. It blows cable and DSL Internet service out of the water,” said Brock Williams, President of LightNex Communications.

LightNex customers also benefit from LightNex's exclusive **LANLink** on-net service providing speeds of up to 100 megabit for both upload and download between LightNex customers. This means that while our customers enjoy downloads from the Internet at up to 20 megabit per second, they can exchange data with other LightNex customers at up to 100 megabit per second. This service is available at no extra charge to all LightNex residential customers.

ABOUT LIGHTNEX COMMUNICATIONS INC. – LightNex Communications, Inc. was founded in 2002 under the name VIVID Networks Inc. to build state-of-the-art fiber-to-the-premise networks to provide telephone, Internet, and cable television services. LightNex is a Montana corporation with Montana owners and has offices in Bozeman and Billings MT. LightNex Communications offers these and other services to both business and residential customers in the Bozeman and Billings markets.
